

Maths

Here are some other maths activities which will benefit your daughter:

- Asking your daughter what number comes before/ after, a specific number chosen by yourself.
 - Counting on from different numbers.
 - Counting forwards & Backwards.
 - Number sequencing – adult says 3 numbers , child replies by saying the 3 numbers after in correct sequence. Example: Adult '9,10,11' .. Child '12,13,14'
 - Number tennis- adult says 1 , child says 2 , adult says 3, child says 4.. ect.
 - Dice rolling- if you have a dice or two at home from board games, it is great for practicing number.
- Roll a dice, cover it quickly with a cup and ask your child to tell you the number of dots they saw on the dice. This skill is called subitising and is very important skill to learn.
 - Another dice rolling activity would be to use two dice. Roll the first and cover it, ask your child to subitise what they saw. Then roll another dice and try to get your daughter to count on from the original dice hidden or allow them to lift the cup and count the dots on both dice.
- The girls love counting to 100 daily using Jack Hartmens YouTube videos which combine counting and actions. This is a fun way of revising counting.

- Helping your child to recognise Maths in daily life- how many plates will we need to lay the table? How many knives and forks will we need? ..ect.
- Board games are also a great way of practising number at home.
- Shape hunt- where can you find shapes at home? draw pictures of the shapes you found. Eg: a photograph is a rectangle, a mirror is in the shape of a circle..ect.
- Practice writing numbers daily, highlighting and correcting reversals. The girls can correct their own numbers once they are shown on a piece of paper the correct way a number is written.
